

Wireless Detection

SRC 3000FMT

Order-No.: SRC 3000FMT

Wireless module for thermal detectors

- The wireless module provides a backup alarm function via the panel
- Backup alarm function of the detector can be switched on / off via the wireless module
- Indication of the signal strength while programming
- After plausibility check transmission of signals (fault, battery capacity) to the panel
- Nominal current 36 μ A
- Power consumption sending: typ. 35 mA,
- power consumption receiving: typ. 18 mA
- Signs of life are sent regularly in order to keep up the control function
- Acoustic warning individually adjustable
- Different signalling modes for test alarm or alarm
- Technical specification:
 - Operation voltage: 9 V DC
 - Quiescent current: max. 20 μ A
 - Alarm current : 32 mA
 - Interfaces : radio link interface to the home detector
 - Storage temperature: -20°C up to +60°C
 - Operation temperature : -10°C up to +60°C
